where you are going,
you'll end up
someplace else"

Yogi Berra

EXAMPLE

Worldwide, influenza kills up to 650 000 people each year according to the Centre for Disease Control and Prevention, and since the virus changes rapidly a new vaccine needs to be developed every six months. A long-term solution that scientists are currently working on is a universal vaccine for all viral strains, but the research still has some way to go. In this study we sought to assess the current knowledge in the field and compare the progress and efficacy of the new techniques to find out how long it will be before we can expect a universal flu vaccine.
